DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The abstract of the disclosure is objected to because in line 1, the phrase "The invention relates to" should be deleted. Correction is required. See MPEP § 608.01(b).
3. The disclosure is objected to because of the following informalities: on page 1, line 3 and page 2, line 9, disclosure of the invention by referring to claims number is not proper since claim numbers could change during prosecution of the application; still on page 1, line 10, "cor-rectly" should read --correctly--, on page 3, line 9, "com-pressed" should read compressed, and on page 4, lines 3 and 9, "com-pensated" and "plu-rality" should read --compensated-- and --plurality--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Smallegan et al. (US Patent 4,384,667).

With regards to claim 1, Smallegan et al. discloses a tool for piercing nuts (col. 1, lines 12-14) comprising a die part 24 and a punch part 36 and a piercing nut feeder 48, wherein a cylinder 82 and piston 90 assembly is arranged between a press 70 and the punch part 36, the pressure in the cylinder being settable for adjusting the pressure exerted upon the piercing nut by the punch part (col. 4, lines 24-29).

For claims 2 and 3, see column 3, lines 28-30.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
